U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11, does NOT place the application in condition for allowance because: Applicant argues (with respect to claim 1) that the cited art does not disclose or anticipate "transmitting from the meter data center to a first carrier meter payment center located in the first country the funds attributable to the first and secondcarriers; and transmitting from the first meter payment data center to the second meter paymnet data center located in the second country the funds attributable to the second carrier." However, Examiner disagrees. Kadaba transmits payment from a shipper (Examiner intreprets a meter data center to be any location where mail is paid for) to a first carrier billing system where chargesdue to the first carrier are deducted from the total transmitted amount [0103]. Thus, charges attributed to the first and second carrier are transferred to the first carrier center. Kadaba further discloses that the remaining amount is transferred to an escrow account which transfers the remaining balance to the second carrier when requested by the second carrier [0103]. Thus, funds attributed to the second carrier are transmitted from a first carrier via an escrow account. Further, when intrepreting the claims the Examiner has given "meter data center", "first carrier payment center", and "second meter payment data center" the broadest responsible intrepretation as being "a center", "a first center", and " a second center". Hence, as long as the funds are transmitted from one Icoation to a first location to a second location, the claim limitation is met. Applicant further argues (with respect to claims 6 and 7) that the cited references do not disclose transferring funds from the first meter payment data center to the second country meter payment data center when mail is scanned in the second country. However, Kadaba discloses that a manifest is created by scanning a parcel at a first carrier and when the second carrier receives the manifest from the first carrier billing is initiated [0067; 0069; 0098] (i.e. payment is requested and funds transferred). Further, Wade discloses scanning the mail when it arrives at a first carrier associated with a first domain and scanning the mail when it is handed off to the second carrier associated with a second domain [0030] to determine a payment balance [0034; see Fig. 2]. Wade further discloses scanning mail when received in a foreign country [0039]. Applicant further argues (with respect to claim 9) that art does not disclose where the sender is notified when the mail piece arrives in the second country. Examiner submits that Wade discloses scanning a mailpiece when handed off as discussed above [0030]. Further, Ashaari discloses the mailer is notified of the shipment status [0077]. Thus, the combination of the references suggest notifying a sender when a mail piece arrives in a second country.
